

# Thermo Top P Features

## Innovation

The new Thermo Top P (P = Power) reduces the heating time by approx **30%**.

This means it is ideal for large vehicles – the perfect solution for this fast-selling market niche. As a technical upgrade of our tried and tested Thermo Top C model, the Thermo Top P has a slower water flow rate, which in turn leads to the water in the circuit being heated, to a higher temperature.

A plus point = shorter heating time, clear benefits!

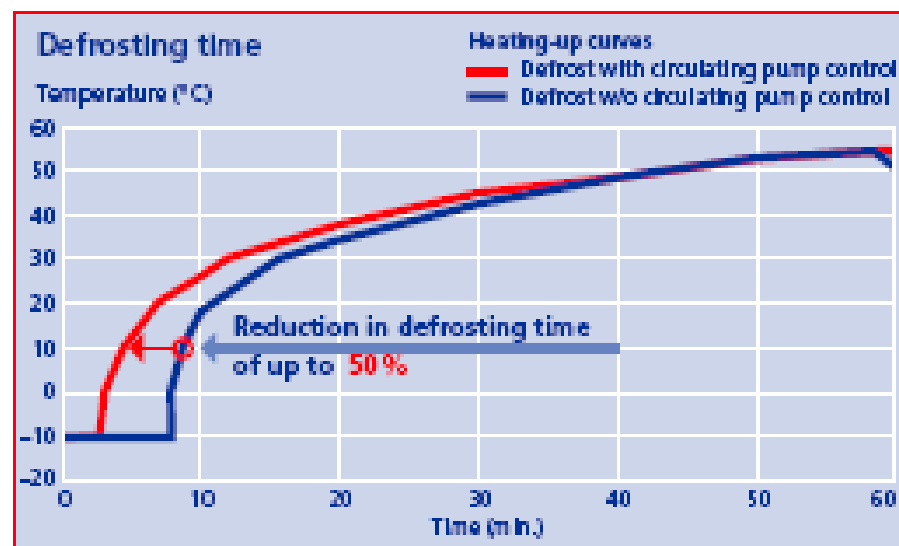

- ✳ Shorter waiting times
- ✳ Greater heating comfort with identical heating times
- ✳ Greater heating comfort for spontaneous, short-term heating needs
- ✳ Noticeably faster defrosting

### The principle of our technical modification:

by slowing down the water flow rate, we have managed to achieve a faster rise in the water temperature and higher water temperatures. This improvement in the efficiency of the heat exchanger means the car's interior heats up quicker.

Because of the technical modification we have made, the Thermo Top P is ideal for large vehicles.

- ✳ Cold Climate Expedition
- ✳ Executive and luxury class cars
- ✳ Vans and minivans
- ✳ SUVs
- ✳ Special-purpose vehicles (such as ambulances)

Direct comparison of parking heater effectiveness after 10 and 15 minutes (Van at -10°C ambient temperature)
